Glicine

Outdoor lighting structure that consists of one basic module and two aged copper reflectors. The stem is made from aged brass tubes and cast brass supports.The structure can be extended at will with the addition of extension modules to be ordered separately; extension module includes lighting appliance. When ordering must be specified the total length of the structure. Both versions are designed for using accessories from our product range, to be ordered separately: BASE4 to be anchored to the lawn while for installation on a rigid surface use BASE6 (when electric connection is inside the base) and BASE7 (when electric connection is already equipped in a recessed box). The item is provided with bulb. It can be covered with climbing plants or fabric lampshades, not available.
